1 Data Sources

Some data sources I would be interested in scraping include anything that has to do with the cryptocurrency market, or the stock market. Also, I believe analyzing market sentiment using the hashtags or mentions in tweets for the coin tickers or stock tickers could be an important variable to analyze when making a trade or investment at a specific time.

2 Questions to Answer

2.1 Question 5. Part d

The type of object for the associated command is a data frame.

2.2 Question 6. Part 4

The class for df1 is a data frame while the class for df is SparkR

2.3 Question 6. Part 5b

If I was to try the previous command on df1 it would not work. The syntax for R and SparkR are not the same.

2.4 Question 6. Part 6b

If I was to try the previous command on df1 it would not work. The syntax for R and SparkR are not the same.
